

Servlet记录

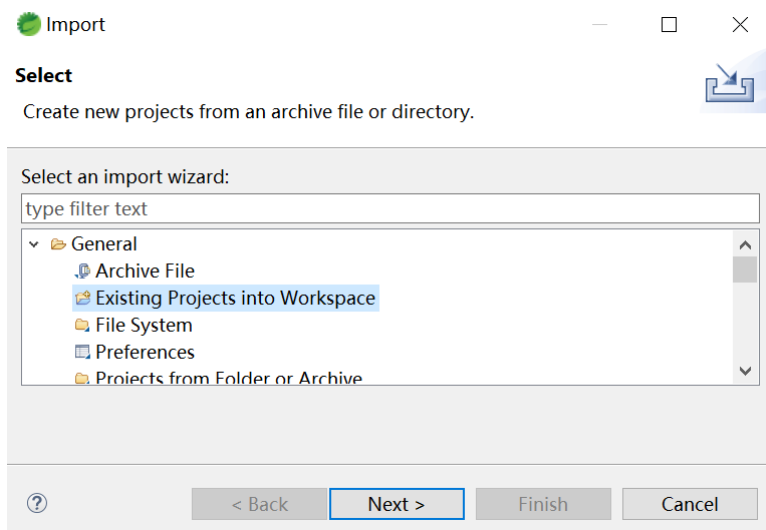

Servlet记录

1. 导入别人已经写好的web项目
步骤
2. Tomcat启动失败
问题：指定的主资源集无效
3. 新建一个Servers
4. STS包分层显示
5. 端口释放
6. 报错The project cannot be built until build path errors are resolved
7. 打开项目后出小红曲线
8. servers可运行但404

1. 导入别人已经写好的web项目

步骤

1. File→import→如下页面→next

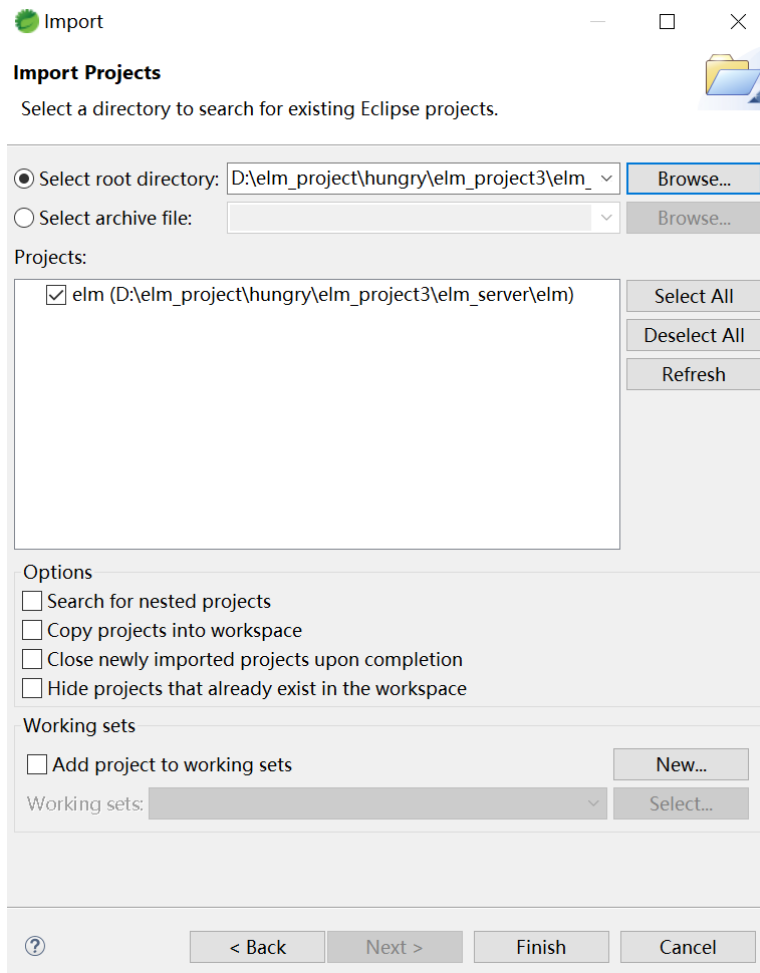

2. 选择路径，需要选择如图所示的工程的那个文件夹

名称

- .metadata
- .settings
- build
- src
- WebContent
- .classpath
- .project

选择路径 → finish

2. Tomcat启动失败

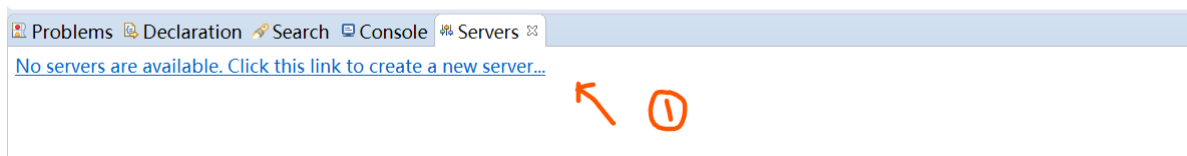

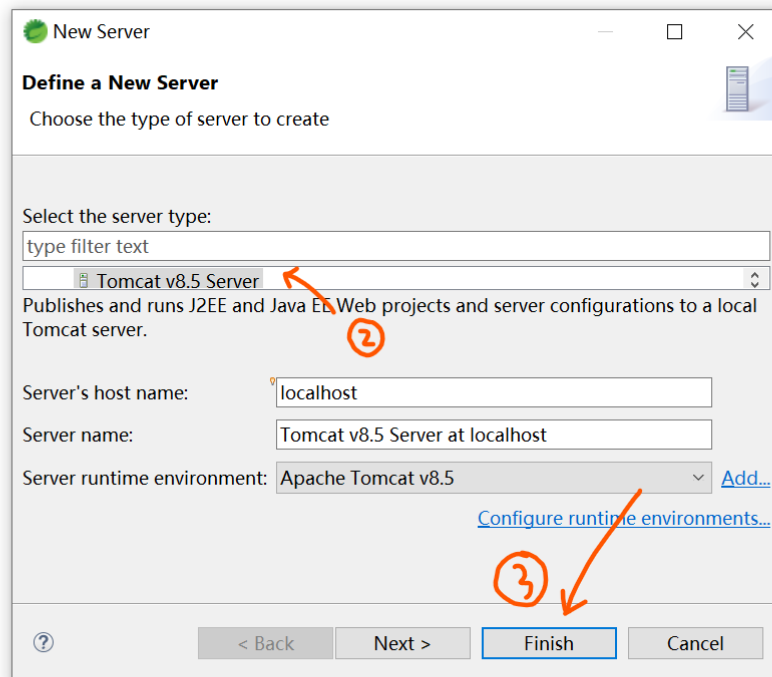

问题：指定的主资源集无效

解决：将server.xml → Source中的 <Context DocBase ...> 注释掉

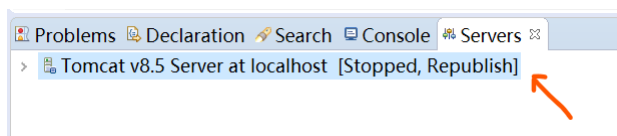

- ▼ > Servers [hungry master]
 - ▼ > Tomcat v8.5 Server at localhost-config
 - catalina.policy
 - catalina.properties
 - context.xml
 - > server.xml
 - tomcat-users.xml
 - web.xml

(不是主要问题)

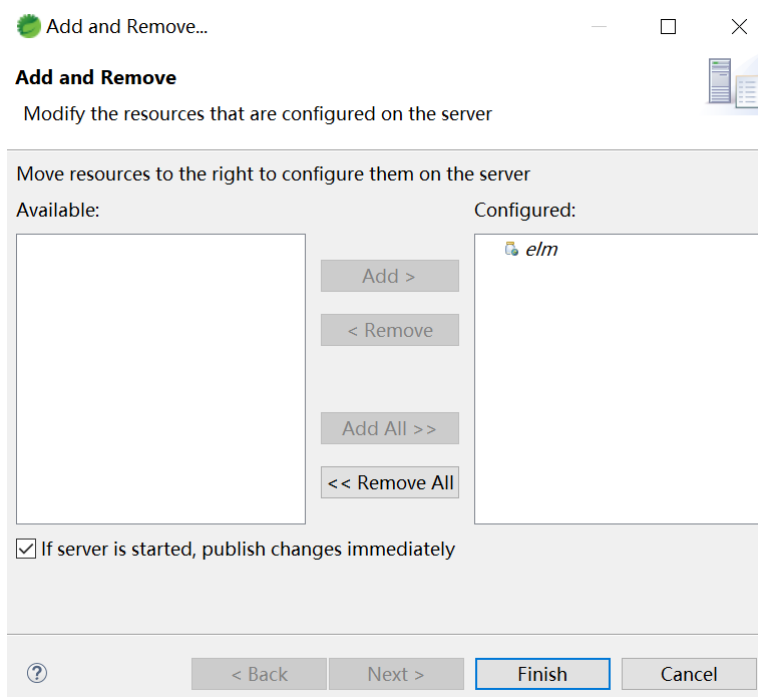

3. 新建一个Servers

右键单击，选择add and remove

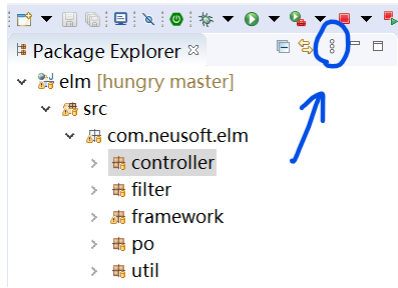

选中elm，添加

4. STS包分层显示

Package Presentation → Hierarchical

5. 端口释放

```
netstat -ano | findstr 被占用端口号
```

```
taskkill /t /f /im 被占用端口对应的TCP号
```

出现无法终止PID的进程，拒绝访问

用管理员身份打开命令提示符

6. 报错The project cannot be built until build path errors are resolved

解决：参考[\(54条消息\) eclipse解决The project cannot be built until build path errors are resolved错误 培根芝士的博客-CSDN博客](#)

7. 打开项目后出小红曲线

右键 -> properties -> UTF-8

8. servers可运行但404
